Applicant's election without traverse of Group I in Paper No. 2 is acknowledged.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1, 2, 6-8, 12, 39, 40 and 42-61 are rejected under 35 U.S.C. 102(e) as being anticipated by Zhou et al. (6,479,561).

Zhou et al. Discloses molded/shaped articles comprising a urethane foam which is coated with a urethane coating which reads on the gel layer of applicants' claims (see the entire document).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1711

Claims 3, 4, 5, 7-11, 13, and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhou et al.

Claims are rejected for the reasons set forth in the rejection under 35 U.S.C. 102 set forth above. Claims differ in that another layer is not placed atop the urethane film in Zhou et al. However, the employment of top coat layers in urethane article formation is well known to the art for the purpose of providing articles having enhanced resilience and feel. Accordingly, it would have been obvious for one having ordinary skill in the art to have utilized additional topcoats in the making of the articles of Zhou et al. in order to achieve articles of enhanced resilience and feel in the absence of a showing of new or unexpected results.
